STATISTICS

OF

THE STATE OF QUEENSLAND

FOR THE YEAR

1944-45.

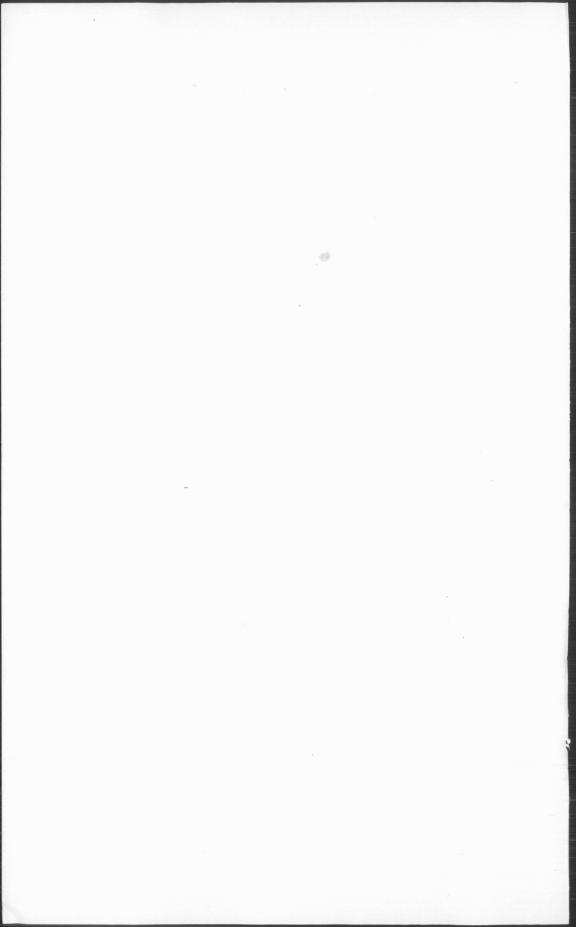

COMPILED FROM OFFICIAL RECORDS.

S. E. SOLOMON, Government Statistician.

PART B.—PRODUCTION.

Section ii. - MANUFACTURES and MINERALS.

BY AUTHORITY:
A. H. TUCKER, Government Printer, Brisbane.

PART B.—PRODUCTION.

1. MANUFACTURES.

<u>Definition of Factory.</u> - A factory for statistical purposes is an industrial establishment in which four or more hands are employed or in which power other than hand or horse is used.

Average Number of Persons Employed. - This information has been compiled in two ways - average number of hands over the whole year, i.e., the number of persons required for a full twelve months to do the work actually done by individual factories during the periods they were operating; and be average number over the period of operation, i.e., the sum of the figures for individual factories of the average number of persons working during the period the factory operated.

 $\underline{\text{Value of Output.}}$ - This represents the selling price at the factory of all products manufactured during the year, whether sold or held in stock.

Value of Production. - This figure is arrived at by deducting from the value of output the cost of raw materials, containers, fuel, light, power, oil, water, tools replaced, and repairs to buildings and plant. It has been agreed upon by the Australian statisticians as being the best estimate at present obtainable of the contribution of factories to national wealth production. It is still subject to deductions for depreciation, and for postage, advertising, and similar expenses. Subject to these deductions, it represents the fund which provides wages and salaries, profits, interest, and rent.

TABLE NO. 1.

SUMMARY OF FACTORY STATISTICS - QUEENSLAND.

(Note:- In this table heat, light, and power factories (Class xvi) are included.)
